| PROJECT TITLE | ANALYTICS OF HOSPITAL HEALTH CARE DATA |

TEAM MEMBERS:

pradeep rajal (Team Leader)

Tahsin Ansari I (Team Member 1)

Mohammed Sameer ali (Team Member 2)

dinesh (Team Member 3)

CHAPTER 1

INTRODUCTION

This project is about the analytics for hospital health care data using data analytics. Data Analytics is the process of examining data sets in order to find trends and draw conclusions about the information they contain. The data analytics is done with the specialized systems and software. Data analytics technologies and techniques are widely used in commercial industries to enable organizations to make more informational business decisions.

1.1 PROJECT OVERVIEW

Recent Covid-19 pandemic has raised alarms over one of the most overlooked areas to focus

Example: Health care Management

While health care management has various use cases for using data science, patient length of stay is one critical parameter to observe and predict if one wants to improve the efficiency of health care management in a hospital.

This parameter helps hospitals to identify patients of high LOS risk (patients who stay longer) at the time of admission. once identified patients with high LOS risk can have their treatment plan optimized to minimize LOS and lower the chance of staff/visitors infection. Also prior knowledge of Los can aid in logistics such as room and bed allocation planning.

Suppose you have been hired as Data Scientist of Health Man -not for profit organization dedicated to manage the functioning of hospitals in a professional and optimal manner.

1.2 PURPOSE

Data analytics in health care is vital. It helps health care organizations to evaluate and develop practitioners, detect anomalies in scans and predict outbreaks in illness, per the Harvard Business School. Data Analytics can also lower costs for health care organizations and boost business intelligence. Hospital data analytics can look over patient data and any prescribed medication to alert doctors and patients of incorrect dosages or wrong prescriptions, which lessens human error and the cost to your hospital. This in turn helps in gaining better insights and also enables healthcare practitioners to make well-informed decisions

CHAPTER 2

LITERATURE SURVEY

The main aim of this paper is to provide a deep analytics on the research field of healthcare data analytics, This is analyzing the previous studies and works in this research area, as well as highlighting some of the guidelines and gaps. This study has used seven popular databases and selected most relevant papers, in order to conduct this paper. The paper has listed some of the data analytics tools and techniques that have been used to improve healthcare performance in many areas such as medical operations, decision making reports, prediction and prevention system. Moreover, the systematic review has showed an interesting demographic of fields of publication, research approaches, as well as outlined some of the possible reasons and issues associated with health care data analytics, based on geographical distribution theme[1]

This paper deals with advanced analytical methods to focus on healthcare. This includes the clinical prediction models, temporal data mining methods, and visual analytics. Integrating heterogeneous data such as clinical and genomic data is essential for improving retrieval techniques that can enhance the quality of biomedical search will be presented. Data publishing techniques that can enhance the quality of biomedical search will be presented. Data privacy is an extremely important concern in healthcare. Privacy-preserving data techniques will therefore be presented [2].

One of the promises of growing critical mass of clinical data accumulating in electronic health record (EHR) system is secondary use or it may be reuse of data for other purpose, such as quality improvement and clinical research. (1) The growth of such data has increased dramatically in recent years due to incentives for EHR adoption in the US funded by the Health Information Technology for Economic and Clinical Health (HITECH) Act (2). In the meantime, there has also been substantial growth in other kinds of health-related data, most notably through efforts to sequence genomes and other biological structures and functions (3). The analysis of this data is usually called analytics (or data analytics). This chapter will define the terminology of this field, provide an overview of its promise, describe what work has been accomplished, and list the challenges and opportunities going forward [3].

Clinicians, healthcare providers-suppliers, policy makers and patients are experiencing exciting opportunities in light of new information deriving from the analysis of big data sets, a capability that has emerged in the last decades. Due to the rapid increase of publications in the healthcare industry, we have conducted a structured review regarding healthcare big data analytics. With reference to the resource-based view theory we focus on how big data resources are utilized to create organization values/capabilities, and through content analysis of the selected publications we discuss: the classification of big data types related to healthcare, the associated analysis techniques, the created value for stakeholders, the platforms and tools for handling big health data and future aspects in the field. We present a number of pragmatic examples to show how the advances in healthcare were made possible. We believe that the findings of this review are stimulating and provide valuable information to practitioners, policy makers and researchers while presenting them with certain paths for future research [4].

In this modern techno-world, the term data is unavoidable and certainly, nothing is possible without its usage. The trends about how to analyze the data are the

need of the hour. Data analytics is becoming a future escalating tool of all industries including medicine, robotics, etc. This article briefly explains how data analytics is used in healthcare systems. Health care is the process of maintaining and improving the health of an individual by preventing, diagnosing and treating the diseases, illness and other physical and mental imbalances in people. Data analytics is classified into four types and they are descriptive, diagnostic, predictive and prescriptive analysis. Health care makes use of prescriptive analysis to arrive at the best results and make better decisions. Big data plays a major role in data analytics. It helps the data analysts to collect data from the patients and store them efficiently. After the completion of this whole article, the reader will be able to get the collective idea about health care analytics.[5]

2.1 EXISTING SYSTEM

- ◆ The already existing model is trained with minimal parameters
- ◆ Low accuracy in prediction
- ◆ No feature extraction done
- ◆ High complexity

2.3 PROBLEM STATEMENT AND DEFINITION

- ◆ The aim is to accurately predict the Length of Stay for each patient on a case by case basis so that the Hospitals can use this information for optimal resource allocation and better functioning.
- ◆ The length of stay is divided into 11 different classes ranging from 0-10 days to more than 100 days

IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

3.2 IDEATION & BRAINSTORMING

Template

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

1. 10 minutes to prepare
2. 1 hour to collaborate
3. 2-3 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

- 1. **Set the scene**

Team gathering

Invite everyone who will participate in the session (internal or external stakeholders) to join with at least 10 minutes before the session starts.

Set the goal

Write down the problem you're looking at and what you want to achieve by the end of the session.

Learn how to use the facilitator's tools

Use the facilitator's tools to help you to generate ideas and to prioritize them.

Start a whiteboard

1. Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

10 minutes

How might we best solve this problem?

2. Key rules of brainstorming

To run an effective and productive session:

- 1. Stay on topic
- 2. Encourage wild ideas
- 3. Build on others' ideas
- 4. Stay focused
- 5. One idea at a time
- 6. A problem is not a problem

3. How to prepare for a session

Use this template to help you to generate ideas and to prioritize them.

Start a whiteboard

Need some inspiration?

Use a related concept or idea to generate your own ideas.

Open a whiteboard

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

15 minutes

3

Group ideas

Take turns showing your ideas while clustering similar or related ideas as you go. In the last 10 minutes, give each cluster a sentence identifier. It is easier to trigger ideas this way. By the end, you will have 3-4 big ideas and 1-2 subgroups.

10 minutes

VISUALIZATION

3

3 Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ones are important and which are feasible.

28 minutes

4

4 After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick and easy

1. **Share the mural**
Share a share link to the mural with stakeholders to help them in the way about the outcomes of the session.
2. **Export the mural**
Export a copy of the mural as a PNG or PDF containing all the content. Includes all data, to work at your time.

Keep moving forward

- Strategy Blueprint**
Create an all-encompassing of a strategy or roadmap.
[View the template](#)
- Customer experience journey map**
Illustrate of customer needs, interactions, and outcomes for an experience.
[View the template](#)
- Strengths, weaknesses, opportunities & threats**
Identify strengths, weaknesses, opportunities, and threats (SWOT) for a company or plan.
[View the template](#)

More templates

3.3 PROPOSED SOLUTION

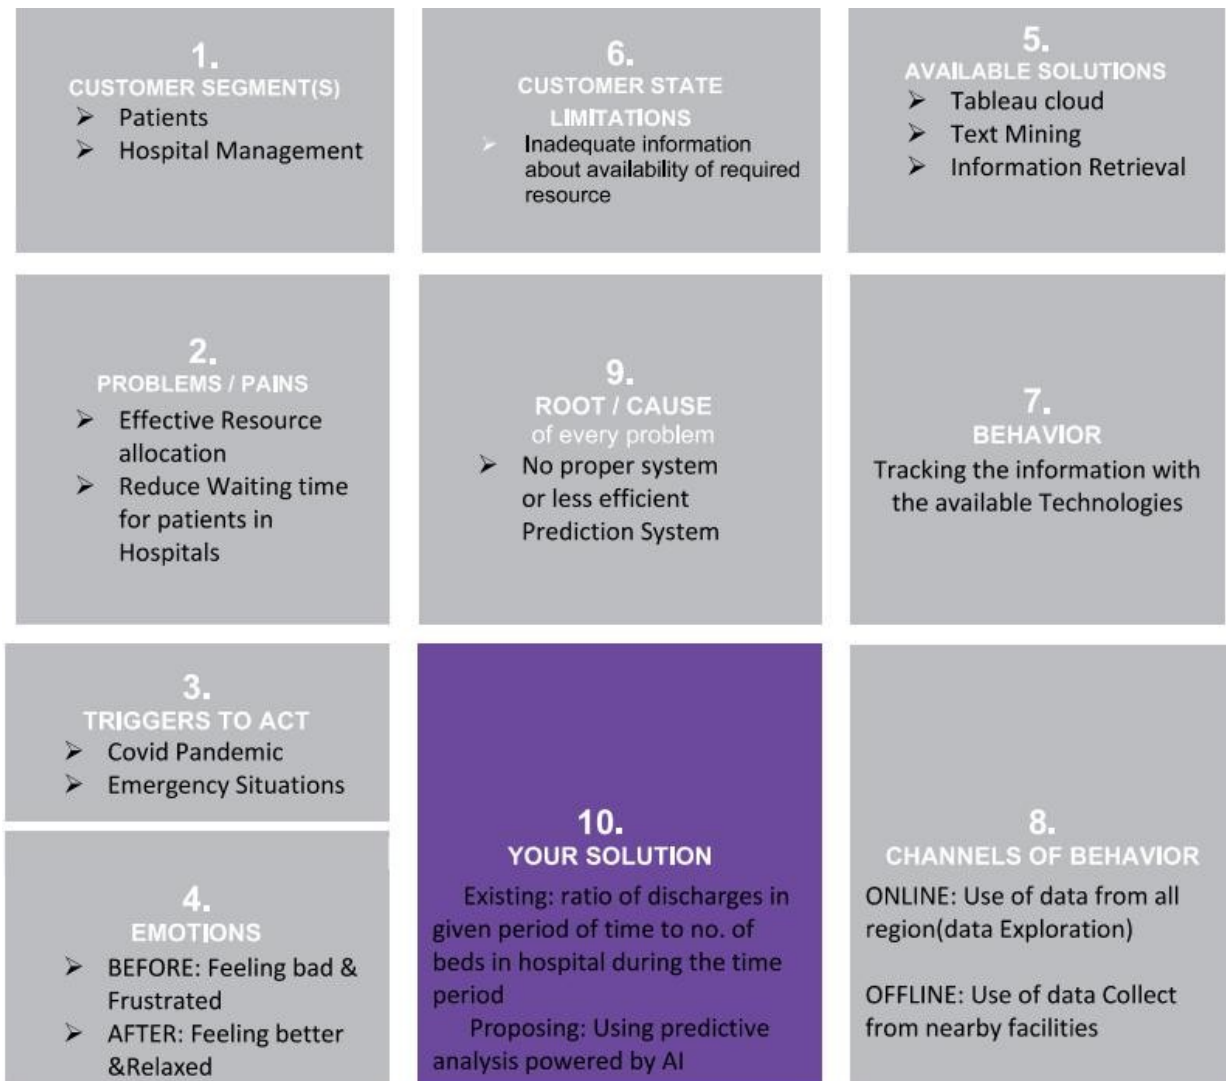

Predicting the length of stay of patients.

The length of the stay can be predicted using either Randomforest or Decision Tree for more accuracy. Certain parameters like age, stage of the diseases, disease diagnosis, severity of illness, type of admission, facilities allocated, etc., are used for prediction. IBM Cognos will be used for data analytics.

The model will be trained using colab. It predicts the length of stay (LOS) of the patients with more accuracy. As a result proper resources and therapy can be provided. Patients can get proper treatment and better medical care than before which helps them for their faster recovery. So the prediction minimizes the overflow of patients and helps in resource management and optimizes their resource utilization. Hence this leads to faster recovery and lower the expenses for treatment. It improves the trust in hospital management.

It avoids the major risk of spreading infection among the hospital staff. This leads to overall safety of hospital staff and patients. Resource consumption is optimized. This model can be used by all government hospitals, private hospitals, and this model is also trained with the real world hospital survey for better prediction small clinics. Length of the stay will be predicted with more accuracy. This model predicts the length of the stay for all kinds of patients and predicts with more accuracy

3.4 PROBLEM SOLUTION

CHAPTER 4

REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------|--|
| FR-1 | Collect data | Data from various sources are collected using different methods in order to provide optimized results. |
| FR-2 | Data Cleaning and Wrangling | When combining multiple data sources, there are many opportunities for data to be duplicated or mislabeled hence we cleanse the data |
| FR-3 | Creating data model | The process of analyzing and defining all the data, as well as the relationships between those bits of data comes under this. |
| FR-4 | Prediction and Analysis | The hidden trends are analyzed and the final results are predicted using machine learning and AI algorithms. |

4.2 NON FUNCTIONAL REQUIREMENT

| FR No | Non-Functional Requirement | Description |
|-------|----------------------------|---|
| NFR-1 | Usability | The project must be easy to use. The user needs to have a good experience while working with the interface. |
| NFR-2 | Security | Every user can access the website only if they possess the password. The database is secured with encryption techniques which provides high levels of security |
| NFR-3 | Reliability | The project must have minimal degree of failure under normal usage and how often does the user get access to this work |
| NFR-4 | Performance | The project must respond quickly to the user's actions or even if the user has to wait the waiting period must be short. |
| NFR-5 | Availability | The project is platform independent. It runs perfectly on almost every platform |
| NFR-6 | Scalability | The project allows multiple users to handle the data at the same time. It is highly scalable since adding features and making advancements in the website is uncomplicated. |

CHAPTER 5

PROJECT DESIGN

5.1 DATA FLOW DIAGRAMS

5.2 SOLUTION & TECHNICAL ARCHITECTURE

SYSTEM ARCHITECTURE:

ETL PROCESS (DATA INTEGRATION PROCESS):

5.3 USER STORIES

User Stories

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|---------------------|-------------------------------|-------------------|---|--|----------|----------|
| Customer (Web user) | | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account / dashboard | High | Sprint-1 |
| | | USN-2 | As a user, I will receive confirmation email once I have registered for the application | I can receive confirmation email & click confirm | High | Sprint-1 |
| | | USN-3 | As a user, I can register for the application through Gmail | I can register & access the dashboard | Medium | Sprint-1 |
| | Login | USN-4 | As a user, I can log into the application by entering email & password | I can access the dashboard | High | Sprint-1 |
| | Dashboard | USN-5 | As a user, I can upload the datasets to the dashboard | I can access various operations | High | Sprint-1 |
| | View | USN-6 | As a user, I can view the patient details | I can view the visual data and the result after the prediction | High | Sprint-2 |
| Admin | Analyse | USN-7 | As an admin, I will analyse the given dataset | I can analyse the dataset | High | Sprint-2 |
| | Predict | USN-8 | As an admin, I will predict the length of stay | I can predict the length of stay | High | Sprint-2 |

CHAPTER 6

PROJECT PLANNING & SCHEDULING

6.1 SPRINT PLANNING & ESTIMATION

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|----------|-------------------------------|-------------------|---|--------------|----------|---------------------------------|
| Sprint-1 | Registration | USN-1 | As a health care provider I can create account in IBM cloud and the data are collected. | 20 | High | Geetha K Midhula R |
| Sprint-2 | Analyze | USN-2 | As a health care provider all the data that are collected is cleaned and uploaded in the database or IBM cloud. | 20 | Medium | Naga grishma K Guduru pavani |
| Sprint-3 | Dashboard | USN-3 | As a health care provider I can use my account in my dashboard for uploading dataset. | 10 | Medium | Midhula R Guduru pavani |
| Sprint-3 | Visualization | USN-4 | As a health care provider I can prepare data for Visualization. | 10 | High | Midhula R Naga grishma K |
| Sprint-4 | Visualization | USN-5 | As a health care provider I can present data in my dashboard. | 10 | High | Geetha K Naga grishma K |
| Sprint-4 | Prediction | USN-6 | As a health care provider I can predict the length of stay | 10 | High | Geetha K Guduru pavani |

6.2 SPRINT DELIVERY SCHEDULE

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date(Actual) |
|----------|--------------------|----------|-------------------|---------------------------|---|-----------------------------|
| Sprint-1 | 20 | 6 Days | 24 Oct 2022 | 29 Oct 2022 | 20 | 29 Oct 2022 |
| Sprint-2 | 20 | 6 Days | 31 Oct 2022 | 05 Nov 2022 | 20 | 05 Nov 2022 |
| Sprint-3 | 20 | 6 Days | 07 Nov 2022 | 12 Nov 2022 | 20 | 12 Nov 2022 |
| Sprint-4 | 20 | 6 Days | 14 Nov 2022 | 19 Nov 2022 | 20 | 19 Nov 2022 |

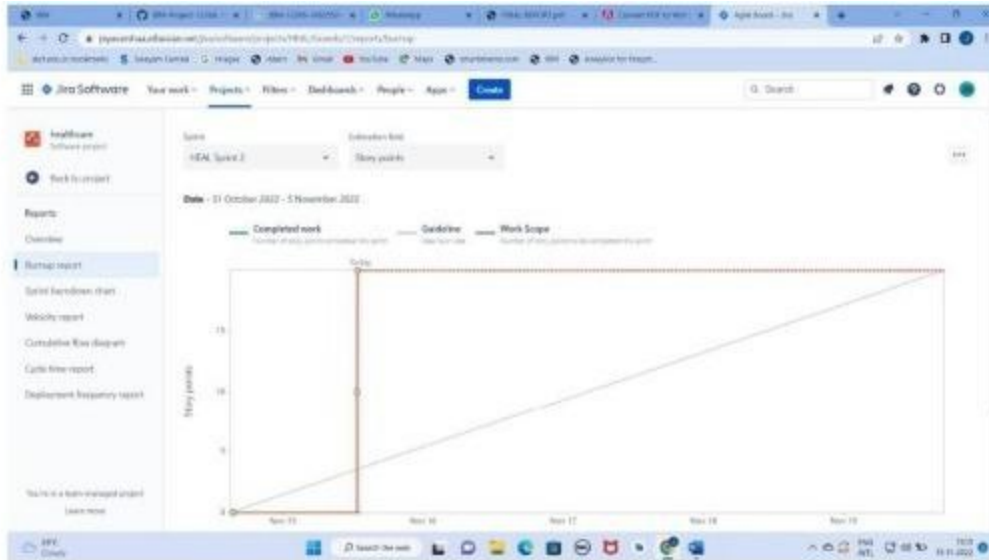

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

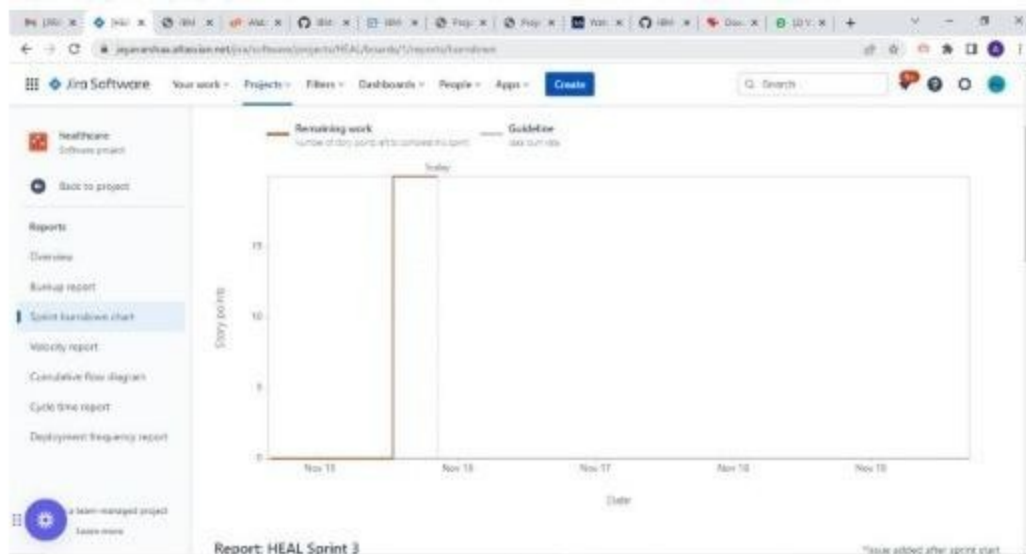

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

6.3 REPORTS FROM JIRA

Burnup chart

Burn down chart

CHAPTER 7

CODING & SOLUTIONING

7.1 FEATURE 1

- Fetched the data from DB2 database.
- Creating responsive dashboard.
- Inserting filter for each chart
- Creating report
- Created reports using multiple graphs and charts

7.2 FEATURE 2

- Creating stories and performed.
- Perform animation render image from website.
- Included graphs and charts.
- Creating web application using bootstrap.
- Embedded the cognos with web application.

7.3 Database Schema

- case_id
- Hospital_code
- Hospital_type_code
- City_Code_Hospital
- Hospital_region_code
- Available Extra Rooms in Hospital
- Department
- Ward_Type
- Ward_Facility_Code
- Bed Grade
- Patient id
- City_Code_Patient
- Type of Admission
- Severity of Illness
- Visitors with Patient
- Age
- Admission_Deposit
- Stay

CHAPTER 8

TESTING

8.1 Test Cases

- ◇ Verify user is able to see Home page.
- ◇ Verify user is able to see Dashboard page.
- ◇ Verify user is able to navigate to Report page.
- ◇ Verify user is able to navigate to story page.
- ◇ Verify filters are working

8.2 User Acceptance Testing

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

| Resolution | Severity 1 | Severity 2 | Severity 3 | Severity 4 | Subtotal |
|----------------|------------|------------|------------|------------|----------|
| By Design | 8 | 5 | 0 | 3 | 16 |
| Duplicate | 1 | 0 | 5 | 0 | 6 |
| External | 0 | 3 | 2 | 1 | 6 |
| Fixed | 13 | 4 | 3 | 16 | 36 |
| Not Reproduced | 0 | 1 | 0 | 0 | 1 |
| Skipped | 0 | 1 | 0 | 1 | 2 |
| Won't Fix | 1 | 4 | 2 | 1 | 8 |
| Totals | 23 | 18 | 12 | 22 | 75 |

3. Test Case Analysis

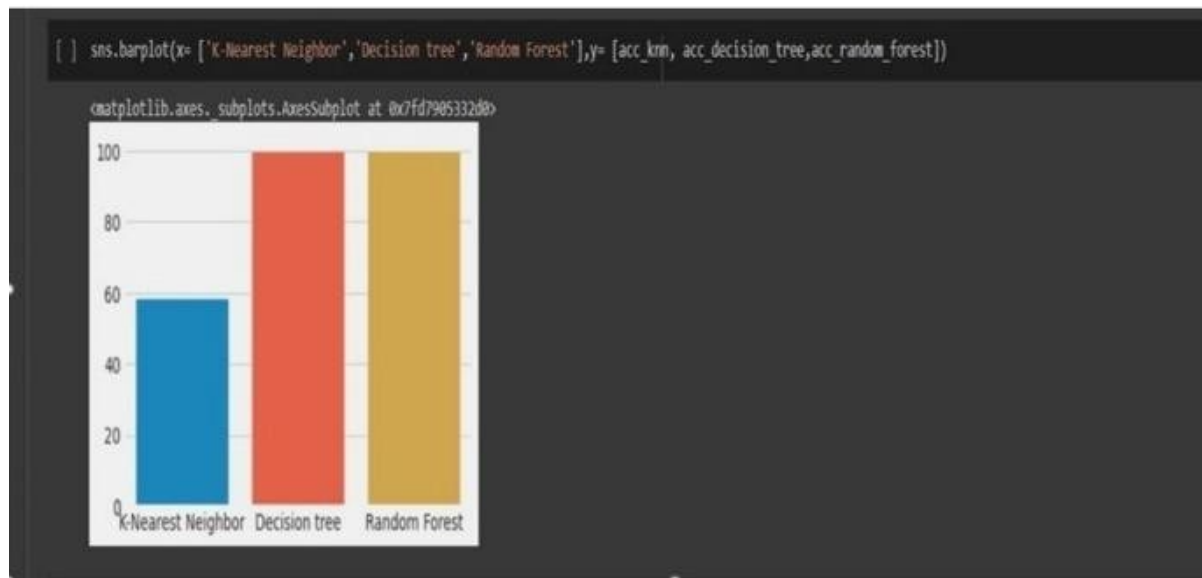

This report shows the number of test cases that have passed, failed, and untested

| Section | Total Cases | Not Tested | Fail | Pass |
|--------------------|-------------|------------|------|------|
| Print Engine | 9 | 0 | 0 | 9 |
| Client Application | 43 | 0 | 0 | 43 |
| Security | 1 | 0 | 0 | 1 |
| Outsource Shipping | 1 | 0 | 0 | 1 |

CHAPTER 9

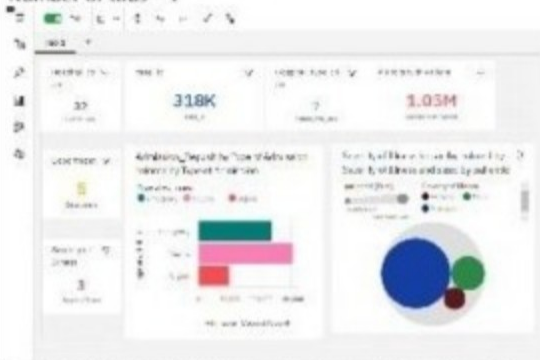

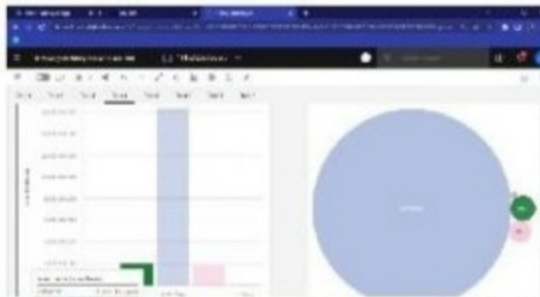

RESULTS

9.1 PERFORMANCE METRICS

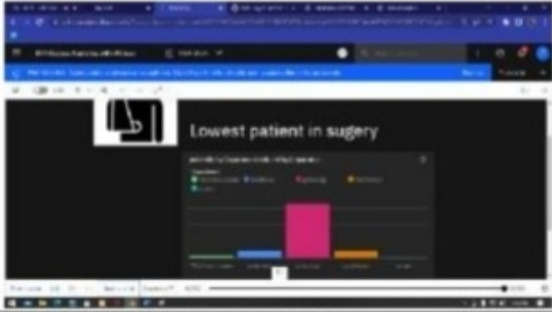

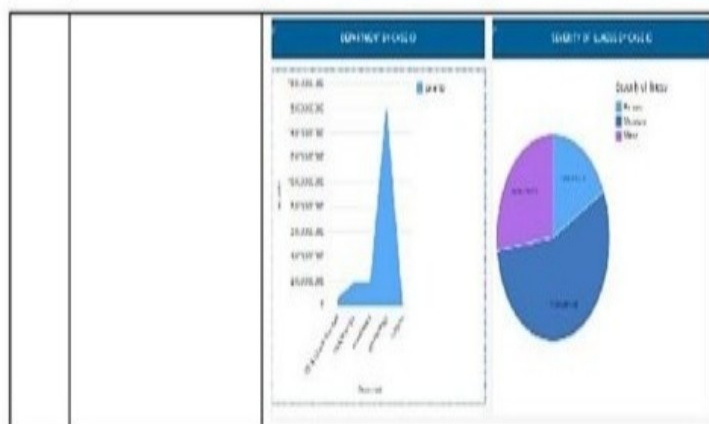

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

| S.No. | Parameter | Screenshot/Values |
|-------|---------------------|---|
| 1. | Dashboard design | <p>Number of Visualizations / Graphs – 22 Number of tabs – 5</p>  <p>The screenshot shows a dashboard with a top navigation bar, a left sidebar with tabs, and a main content area. The main area contains several widgets: a 'Location' widget with a map, a 'Performance' widget with a bar chart, and a 'Security' widget with a pie chart. The dashboard is titled 'Dashboard' and has a 'Filter' button.</p> |
| 2. | Data Responsiveness | <p>Data's will dynamically changed and graph also changed.</p>  <p>The screenshot shows a dashboard with a bar chart and a pie chart. The data in the charts is changing dynamically, as indicated by the text 'Data's will dynamically changed and graph also changed.' The dashboard is titled 'Dashboard' and has a 'Filter' button.</p> |

| | | |
|----|---------------------------------------|---|
| 3. | Amount Data to Rendered (DB2 Metrics) | <p>Number of rows read – 318438 Number of rows loaded – 318438 Number of rows rejected – 0</p>  <p>The screenshot shows a dashboard with a donut chart and a table. The donut chart is titled 'DB2 Metrics' and shows the distribution of data. The table is titled 'The data sample is as follows' and shows the details of the data. The dashboard is titled 'Dashboard' and has a 'Filter' button.</p> |
|----|---------------------------------------|---|

| | | |
|----|-----------------------------|--|
| 4. | Utilization of Data Filters | <p>We created filters for Dashboards which is perfectly working.</p>  |
| 5. | Effective User Story | <p>Number of Scene Added – 7 Animations are perfectly displayed. Images are perfectly rendered.</p>  |
| 6. | Descriptive Reports | Number of Visualizations / Graphs – 6 |

CHAPTER 10

ADVANTAGES AND DISADVANTAGES

ADVANTAGES

- ◇ Cost-effective use of technology
- ◇
- ◇ Improved project management
- ◇
- ◇ Sustaining the improvements in the result
- ◇
- ◇ Boosting hospital capacity
- ◇
- ◇ Enhance the quality and efficiency of healthcare
- ◇
- ◇ benefit areas like emergency preparation, charting, administration, compliance, and
- ◇ financial management.

- ◇ Analysing clinical data to improve medical research
- ◇
- ◇ Using patient data to improve health outcomes
- ◇
- ◇ Gaining operational insights from healthcare provider data
- ◇
- ◇ Improved staffing through health business management analytics
- ◇
- ◇ Early detection of disease.

- ◇ Prevention of unnecessary doctor's visits.

- ◇ Discovery of new drugs.

- ◇ More accurate calculation of health insurance rates.

- ◆ More effective sharing of patient data

DISADVANTAGES

- ◆ Privacy
- ◆ Replacing Doctors
- ◆ Frustration with poor implementation.
- ◆ Cybersecurity risks
- ◆ Healthcare Regulatory Changes.
- ◆ Healthcare Staffing Shortages

CHAPTER 11 CONCLUSION

The impact of data analytics in healthcare has already made a substantial difference in the ability of healthcare providers to offer patients high-quality care in an efficient, cost-effective manner.

However, the role of data analytics in improving patient outcomes and healthcare processes continues to grow and expand as more types of data become available and new tools are developed that make the results of the analytics clear and easy for healthcare professionals to access.

Realizing the potential of data analytics to transform the healthcare industry begins by understanding how the technology can be applied to address healthcare providers' challenges, including staff recruitment and utilization, operational efficiencies, and enhanced patient experiences. Patient-centered healthcare depends on knowing what patients want and need. Data analytics holds the key to unlocking this vital information.

CHAPTER 12

FUTURE SCOPE

Artificial Intelligence (AI) will play a significant role in data analytics in healthcare for the next decade. For example, the field of AI-enabled clinical decision support is just emerging.

This type of support can compare patients who fit similar profiles within a system, then it can alert doctors to trends in data that may have been overlooked. The use of big data in healthcare will include testing for drug interactions that small studies are unlikely to catch and prevent patients from taking harmful drug combinations.

Decisions made by physicians, like what test or treatments to give a particular patient, make up 80-90% of all healthcare spending, so using artificial intelligence to make more educated decisions will bring down healthcare costs. It's crucial to have informed leaders at the vanguard of these innovations in healthcare.

Data Preprocessing & Feature Engineering

'The following features may have relevance with the Length of Stay of a patient'

Department: It Relates to the type of disease. Hence it will have impact on the length of stay of the patients

Type of Admission: It Relates to patients' reason of admission to the hospital and definitely it will have impact on length of stay of the patients

Severity of Illness: It Relates to the curability of disease

Age: Relates to the curability of diseaseThe following features may have relevance with the Length of Stay of a patient

Department: It Relates to the type of disease. Hence it will have impact on the length of stay of the patients

Type of Admission: It Relates to patients' reason of admission to the hospital and definitely it will have impact on length of stay of the patients

Severity of Illness: It Relates to the curability of disease

Age: Relates to the curability of disease

Ward_Type: Relates to the curability of disease

\

'The following features doesn't have relevance with the Length Of Stay(LOS) of Patients'

Hospital_region_code: It is code given to the hospital region which is irrelevant to the Length of Stay.

Bed Grade: It is the grade given to the quality of the bed in ward it is also irrelevant to the length of stay.

patientid: It is the identity number or code given for the identification of the patient which is irrelevant to the length of stay.

City_Code_Patient: It is the city code and irrelevant to the length of stay of patients.

```
'''
as 'Hospital_region_code', 'Bed_Grade', 'patientid', 'City_Code_Patient' are irrelevant to the health or
length of stay of patients so lets drop these parameters from training and testing dataset to improve the performance of model (high accuracy)
by reducing the complexity
'''
train = train.drop(['Hospital_region_code', 'Bed_Grade', 'patientid', 'City_Code_Patient'], axis = 1)
test = test.drop(['Hospital_region_code', 'Bed_Grade', 'patientid', 'City_Code_Patient'], axis = 1)

# Combine test and train dataset for processing
combined = [train, test]
combined
